Description

As a user, I search for flights on specific dates using the search widget completing all fields and I want to see the search result on a different page.

The page will be located at the following URL: <https://www.kayak.com/flights>

The page should not be accessible directly from the browser, the user should see the page only after performing a search. If the user tries to access the page without performing a search, then the browser will redirect the user to the homepage.

The results page will have 4 sections:

Top Menu, **Side Menu**, and **Footer** will have all the features from the Homepage (<https://denisabaicu89.atlassian.net/browse/KYK-1?atlOrigin=eyJpIjoiOTI4YTUyNWVmY2RjZmYxYzk2M2MiLCJwIjoiJ9>).

The only change is that the Side Menu will be collapsed by default.

The **Main Content** section will contain:

- The search widget (with all the features described on <https://denisabaicu89.atlassian.net/browse/KYK-2?atlOrigin=eyJpIjoiZmEyMjIxYmI3YTUyNWVmY2RjZmYxYzk2M2MiLCJwIjoiJ9> is prefilled with information from the performed search (departure airport/city, destination airport/city, departure and return date, travel type, persons traveling, trip class).

The user should be able to modify the search parameters and perform a different search without needing to return to the homepage.

- The flight search filter widget (all the features detailed on US4)
- The Results container

The results container has each search result placed inside a div containing:

- Logo of the company which operates the flight segment
- Departure and landing hours in local time zones
- Number of Stops/connections (if any)
- Travel time for each segment
- IATA Airports code
- Price /best price and which engine provide this price
- View deal and a drop-down button where can select the page where the user can claim the offer
- The First 2 search results will have a flag either Best deal or Cheapest
- Ordering of the results will start with the best report between quality and price.
- A sorting tab option with the following sorting criteria: Cheapest, Best, Quickest, and Other Sort.

Results are paginated, if more results are found, then a "Show more results" button will appear
If there are no results, an appropriate message will be visible to the user instead of the results container

Additional information:

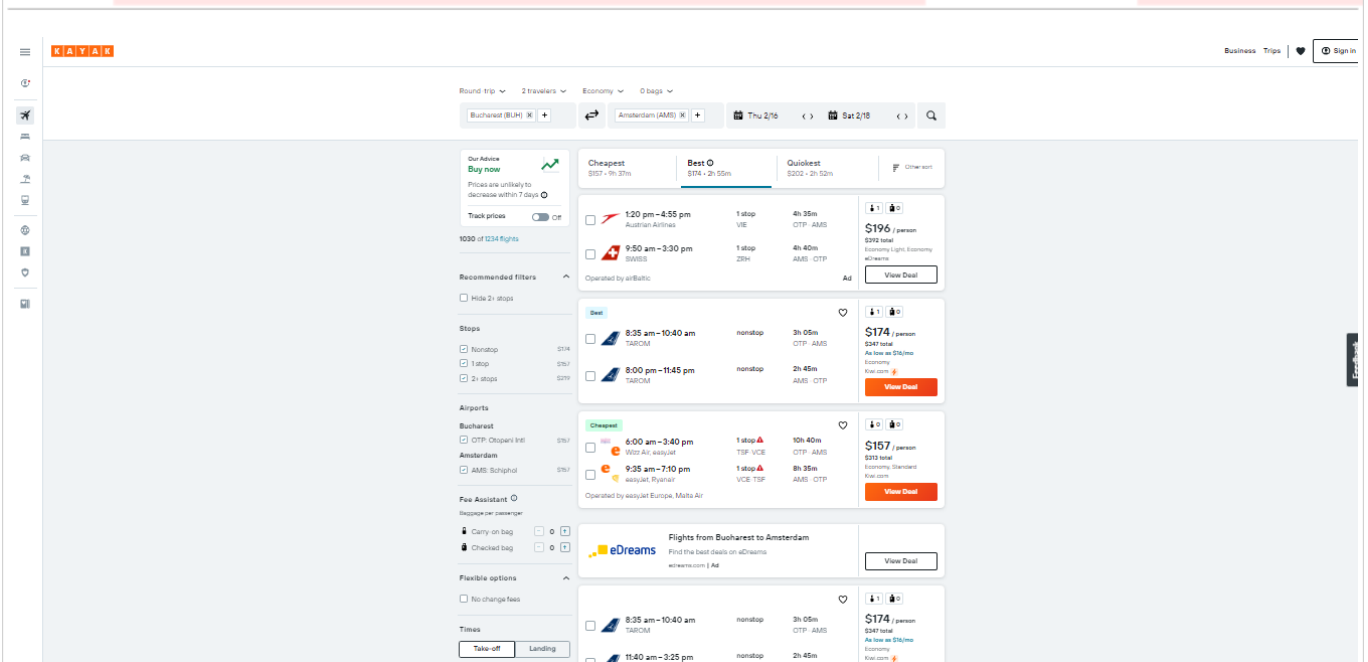

- The page should be responsive
- All the internal links should be functional and should open in the same tab
- All the external links (View Deals button) should open in a new tab

Design:

Mockups attached

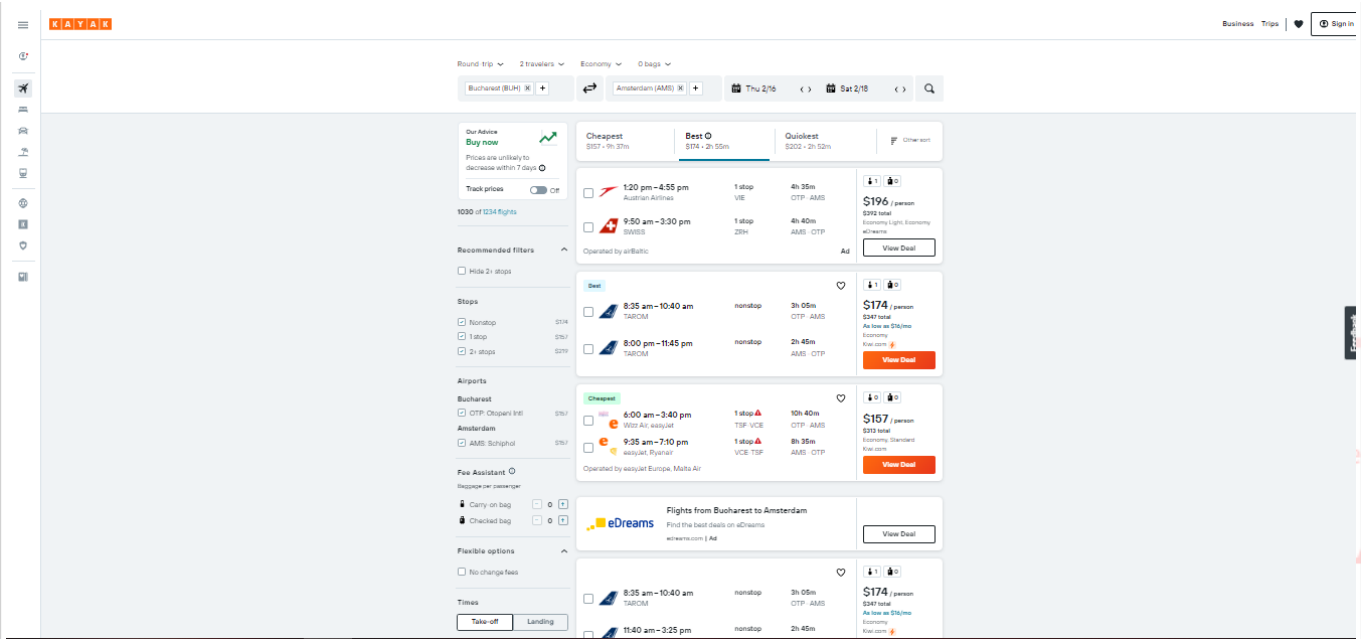

Acceptance Criteria:

- The page loads successfully on <https://www.kayak.com> after a search is performed.
- The page redirects to the homepage if accessed directly without performing a search.
- The page is responsive.
- All information should be present.
- No broken links on the page.
- Search Widget is working as expected.
- The design is consistent.
- No errors on the console.
